 <p><b>Ag</b></p> <p><b>SnO<sub>2</sub></b></p>	
TEM electron diffraction patterns of silver and tin oxide after 45 min in air	TEM-micrograph of SnO <sub>2</sub> grains in silver matrix, Simoloyer®, 25 min

Application
<ul style="list-style-type: none"> <li>contact material</li> </ul>
Advantages
<ul style="list-style-type: none"> <li>low erosion both in make and break operations</li> <li>high extension of the electrical arc</li> <li>low welding force</li> <li>preventing high temperature which leads to a superficial layer of oxide on the top of the contact</li> </ul>

X-ray diffraction patterns of starting and as-milled powder by using of Simoloyer® at 60°C in air

Packaging:

gal	liter	lb	kg
2	6	22	10
15	50	220	100
